Human-centered AI systems — designing tools that make complex organizational and creative processes more human.

EDUCATION

Georgia Institute of Technology • **M.S.** in **Human Computer Interaction**
B.S. in Computational Media + **Minor** in Industrial Design • GPA 3.78

Expected May 2028 (**M.S.**)
Graduated May 2026 (**B.S.**)

SKILLS

Systems & AI design: Human-centered AI systems, data modeling, user flows & information architecture, design systems, component libraries, PRD authorship

Research methods: Qualitative UX, contextual inquiry, field research, usability testing, heuristic evaluation, affinity diagramming

Design & making: End-to-end product design, interaction design, physical computing, 3D modeling (Fusion 360), accessible & inclusive design, interactive prototyping

Tools & languages: Figma, Adobe Creative Suite, DaVinci, Arduino, HTML/CSS/JS, Lovable (AI-assisted rapid prototyping)

WORK EXPERIENCE

AI Creative Intelligence Intern @ Hartmann Studios Creative Lab

June 2026 - Present

3-person creative lab team: UX/UI designer, ML researcher, and HCI researcher

- **Designed the human layer** of an AI-powered IC matching engine alongside an ML researcher, translating embedding-based similarity scores into a ranked, legible shortlist experience that reflects how creative leads actually think about staffing.
- **Led end-to-end systems design** from data modeling and compliance architecture (skill-tier ranking, regulatory flagging) through user flows, PRD, and UI, bridging research insight and ML output into a coherent product.
- **Defined a tiered skill architecture** that prevents primary skills from being obscured by secondary ones in search results, a key design decision that directly shapes match quality and leads trust in the system.
- **Designed three core user flows** with full edge-case mapping, compliance triggers, and system state logic, grounding abstract AI behavior in concrete, trustworthy interactions.
- **Prototyping in Lovable** with real data and AI integration, translating the research and data model into a functional interface without a dedicated engineering team.

Product Designer @ Bits of Good x iCAN Alliance

Jan 2026 - May 2026

2 Person Product Design team, 1 EM, 1 PM, 6 Developers

- **Designed end-to-end gamification flows** for a Tamagotchi-style medication adherence app for children in clinical trials, spanning embedded minigames, reward mechanics, and responsive layouts across 5 sprints.
 - **Authored a Product Usability & Validation Report** to guide testing with pediatric end users, evaluating game flow comprehension and engagement, translating findings into iterative design decisions ahead of deployment.
-

PROJECTS

Physical Computing Designs in CM Senior Capstone (Prof. Michael Nitsche)

Jan 2026 - May 2026

Rhythm Hop: Hallway Noise Intervention

- **Designed an environmental intervention over an enforcement rule:** field research at an elementary school surfaced chaotic hallway noise as a behavioral problem, leading to a light-up floor sequencer that makes collective, organized sound more compelling than chaos.
- **Spanned contextual inquiry to a deployed physical system**, with Arduino firmware and in-context student testing validating that behavior shifts when the environment makes the right choice feel like play.

Laser Lyre: MIDI Instrument

- **Built a fully playable laser lyre from scratch** to answer a design question about fiction and materiality— custom 3D-modeled body in Fusion 360, Arduino photoresistor firmware, and a Python-to-MIDI bridge, with hand-sculpted clay finishing. An independently ideated concept that became a functional instrument.
-

LEADERSHIP

Georgia Tech Badminton Club • President & D1A Team Captain

May 2025 - Present

- Managed 2 open tournaments per semester (80+ participants); D1 collegiate player; raised \$2.5K+ in fundraising.

GT Design Club • Community Engagement Officer

May 2025 - May 2026

- Founded UX/UI project teams; guide members through full design cycles from user research to hi-fi prototyping.

Vertically Integrated Project: Empathy Bytes • Media Subteam Lead

Aug 2024 - Jan 2026

- Lead media subteam designing and developing interactive deliverables that communicate Atlanta Olympics research through visual storytelling, documentaries, and interactive Figma prototypes.
